

Thermosystems Project Profile:

NORTHWEST HEALTH LAKESHORE SURGICARE

Chesterton, IN
2023

THE SITUATION

Every detail counted during an RTU replacement for Northwest Health Lakeshore Surgicare. With the entire project needing to be completed in a single weekend, the facility needed a trusted partner to ensure new equipment could be installed without issues.

A COLLABORATIVE SOLUTION

In partnership with Arctic Engineering, our team took the time to understand the full scope of the project. Before equipment was ordered, measurements were verified and coordination with the factory occurred to ensure a precise fit.

THE RESULT

By Monday, Northwest Health Lakeshore Surgicare had a **fully installed and operational RTU delivering cool, clean air**. Installation and startup were completed seamlessly.

This outcome was made possible because of:

Thorough Planning

Early verification of project requirements minimized risk and streamlined installation.

Trust-Driven Partnerships

A collaborative approach focused on long-term reliability and trust.

“Thermosystems was a critical partner in the replacement of this 90 Ton RTU over a single weekend. They joined us on the jobsite to verify measurements and ensure that the replacement unit was an exact fit. After the unit was set, they also made themselves available on a Sunday to troubleshoot system issues unrelated to the RTU which allowed the project to be completed. I can't recommend them highly enough!”
